

CONVOLUTIONAL NEURAL NETWORKS AND ALGEBRAIC SCALE INVARIANCE FOR SPEECH CLASSIFICATION

MFCC

Current models uses complex human-engineered MFCC features for modelling.

THE DIELEMAN NETWORK

The Dieleman network can hopefully learn the MFCC features or something better.

SCALE INVARIANT REGUALIZATION

$$\mathcal{R}(s) = \frac{1}{N} \sum_{i=1}^N \left. \frac{\partial P(C_{i,k}|s(x_i, \alpha), w)}{\partial \alpha} \right|_{\alpha=0}^2$$

Scale invariant

$$s(x, \alpha) = (1 + \alpha)x \quad \mathcal{R} = \frac{1}{N} \sum_{i=1}^N (\nabla_x P(C_{i,k}|x_i, w) \cdot x_i)^2$$

Offset invariant

$$s(x, \alpha) = x + \alpha \quad \mathcal{R} = \frac{1}{N} \sum_{i=1}^N (\nabla_x P(C_{i,k}|x_i, w) \cdot \mathbf{1})^2$$

DIELEMAN RESULTS

	TIMIT	ELSDSR
Baseline	0.354	0.465
Logistic on mean	0.094 ± 0.012	0.030 ± 0.007
GMM on MFCC	0.192 ± 0.024	0.140 ± 0.019
Dieleman	0.093 ± 0.012	0.026 ± 0.006
Dieleman + L2	0.114 ± 0.013	0.036 ± 0.016
Dieleman + Scale	0.111 ± 0.015	0.022 ± 0.006
Dieleman + Offset	0.107 ± 0.008	0.027 ± 0.014

Missclassification rate on sex classification.

	TIMIT	ELSDSR
Baseline	0.988	0.957
Logistic on mean	0.796 ± 0.046	0.338 ± 0.043
GMM on MFCC	0.836 ± 0.020	0.391 ± 0.023
Dieleman	0.965 ± 0.021	0.570 ± 0.029
Dieleman + L2	0.944 ± 0.020	0.552 ± 0.045
Dieleman + Scale	0.973 ± 0.007	0.640 ± 0.110
Dieleman + Offset	0.971 ± 0.006	0.628 ± 0.117

Missclassification rate on speaker classification.

REGUALIZATION ANALYSIS

Contours of properbability function on 3 synthetic datasets using extream regularization parameters.

Missclassification rate boxplot using optimized regularization parameters.
